

USTELECOM
THE BROADBAND ASSOCIATION

A Greener Future Powered by Broadband

Broadband enabled technologies are helping to support climate solutions and an eco-friendly, sustainable future.

Smart water
systems help save

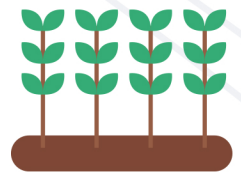

410B

gallons of water
in U.S. homes
annually.

Broadband
helps farmers
use less fuel,
the equivalent
of taking nearly

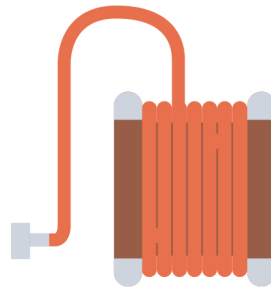

200K
cars off the road.

Fiber is

100x

more energy efficient than
copper-based broadband.

By 2025, smart
transportation
will cut CO2
emissions,
equal to

removing

19M

cars from the
road for a year.

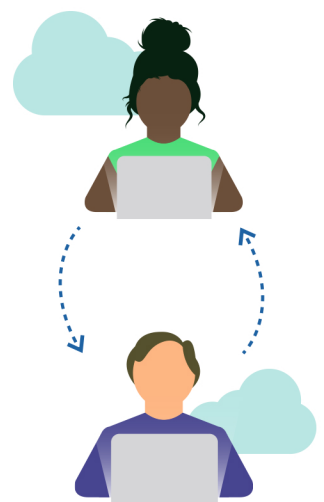

Broadband saves
the average rural
commuter

121 or
HOURS

4,600
MILES PER YEAR

through
teleconferencing
and remote work.
